

# **CEED Intercultural Education Program**

## **~Student's Experience~**

◆ Haruto Suzuki : Master's Course, Division of Mechanical and Space Engineering,  
Graduate School of Engineering (completed in March 2026)

I was interested in studying abroad and communicating with international students but I was not good at English, especially not confident in conversation, so that's why I have started taking English courses offered by CEED. At first, it took me so long to say what I wanted to tell people in the class and I could only manage to speak very slowly, but the teachers and other students encouraged me, saying kindly 'Don't worry! Don't panic!' so I could practise speaking at ease. There is no evaluation on Brush-Up English Courses and the atmosphere is friendly, so I didn't feel any pressure. This helped me to use English better and then I was gradually getting used to speaking English.

In the 'Practical English for Science and Engineering', we were divided into small classes, so I was given detailed advice throughout. It is very important for Engineering students to learn English expressions in scientific fields and how to give presentations, but I had hardly had a chance to learn those, so it was invaluable for me to learn them in this course.

I have been building up confidence in my English skills gradually by taking the CEED English courses, which resulted in having more chances to communicate with international students, attending international conferences, going to university in India for studying and spending some time in a company in Thailand through an international internship program. These enriching experiences helped me to broaden my horizons.

I'm going to be a part of the world of the railway business after graduating from university, which had been my dream. There are many global projects in the railway industry so I would like to keep challenging myself using my English skills learned through the CEED English Courses. I believe that students, whether confident of their English skills or not, would broaden their new possibilities if they participate in CEED's English program. You can join these courses worry-free!

Studying in India

Attending a conference in Italy

\* Courses Attended : Practical English for Science and Engineering  
<Brush-Up English Courses> English Writing, English Discussion, English Communication,  
Practical English for Engineers and Scientists, Talk Talk
